

## DeliverIT

DeliverIT is a software-based enterprise information asset delivery solution enabling Enterprises to benefit from the seamless flow of rich information throughout their organization. It leverages powerful peering technology to intelligently deliver an unlimited amount of information to enterprise users (employees, partners and customers) worldwide. Because it is a software-based solution requiring only a single server, it is seamless to deploy and integrates into a company's existing network environment.

### DeliverIT Benefits:

- Improves corporate communications
  - o Efficient delivery of information assets (large files, audio, video, documents, images, presentations, PDF's, software applications, spreadsheets, corporate portals, etc.) throughout entire enterprise organization
- Strengthens business relationships
  - o Partners, employees, customers, investors, suppliers benefit with tight, regular, RICH communications
- Manages entire content delivery process
  - o Efficiently stores and manages routing of delivered content to leverage existing computing resources
  - o Enables content delivery scheduling / tracking / reporting

### DeliverIT Features:

- Peer-to-Peer technology
  - o Utilizes powerful peering technology to enable efficient and intelligent information flow to all end users (both local and remote)
- Supports any content / any content management solution
  - o Supports any type of business intelligence
- Managed delivery
  - o Supports content delivery scheduling
  - o Content tracking and content consumption reporting
- Optimizes traffic in any network architecture
  - o Can be deployed on any IP network
  - o Requires no investment in additional computing or network resources
  - o Maximizes throughput by allowing intelligent traffic scheduling

### The DeliverIT Difference:

- Software-based solution
  - o Requires only a single server located at headquarters
  - o Eliminates the need to configure, ship, manage and maintain multiple hardware boxes at various office locations
  - o Centrally managed, seamless scalability
- Designed for Enterprise networks
  - o Specifically developed, designed and engineered to address the bandwidth limitations of enterprise networks
  - o Delivers ANY kind of enterprise content
  - o Supports existing and visionary business initiatives (email, web services, LDAP, etc.)
- Leverages existing computing resources
  - o Employs powerful peering technology to enable all employee PC's to act as virtual delivery servers
